Professional Summary

Computer Science undergraduate focused on **Backend Development**, with experience building **RESTful APIs** using **Flask** and **FastAPI**. Strong foundation in **OOP**, **Data Structures & Algorithms**, **PostgreSQL**, and **Redis**, with hands-on experience in **Authentication**, **Database Design**, and **Scalable Application Development**.

Experience

Freelance Full-Stack Developer | BDCI

Aug 2023 – Present

Web Development & Deployment

Remote

- Designed and developed a full-featured institute management platform using Flask, Vue.js, and MySQL.
- Built RESTful APIs for result verification, authentication, course and branch management.
- Deployed and maintained production applications on cPanel.

Backend Developer Intern | Novem Controls Pvt. Ltd.

May 2025 – Jul 2025

Internship

Mohali, Punjab

- Developed an admin dashboard using Flask and PostgreSQL.
- Implemented CRUD operations, backend APIs, and database management features.
- Assisted in testing, debugging, and deployment of application modules.

Technical Projects

Quiz Master V2 WebApp | GitHub | Live

Nov 2025

A full-stack quiz platform for creating and managing timed and premium quizzes with admin analytics.

- **Tech stack** - Flask, PostgreSQL, Redis, Celery, Vue 3 (Vite), Docker
- Implemented secure auth (JWT + HTTP-only cookies) and bcrypt password hashing with role-based access control.
- Implemented asynchronous background processing using Celery and Redis for emails, scheduled reports, and data exports.
- Containerized backend services using Docker Compose and configured deployment workflows for Render.

Sentiment Analysis Web Application | Live

Apr 2026

Real-time NLP-based sentiment classification system

Python, Hugging Face Transformers, PyTorch, Gradio

- Developed a web application for real-time sentiment analysis, classifying text as positive or negative with confidence scores.
- Leveraged a pre-trained DistilBERT model using Hugging Face Transformers for accurate NLP-based predictions.
- Built and deployed an interactive user interface using Gradio for seamless user interaction.

SMS Spam Classifier | GitHub

Apr-May 2025

Built a text classification model

Scikit-learn, TfidfVectorizer, MultinomialNB

- Achieved 97% accuracy and 96% F1-score using TF-IDF and Multinomial Naive Bayes.
- Evaluated performance using confusion matrix, precision, recall, and F1-score.

Technical Skills

- **Programming Languages:** Python, C++, C
- **Frameworks:** Flask, RESTful APIs, FastAPI, Vue.js
- **Databases:** PostgreSQL, MongoDB, SQLite, Redis
- **Tools:** Celery, Git, Linux, Google Cloud Platform (GCP), AWS, Render, Vercel

Education

Sant Longowal Institute of Engineering and Technology

Aug 2023 – Present

Bachelor of Engineering in Computer Science and Engineering

CGPA: 9.12

Achievements

- Qualified **GATE CSE 2026**, demonstrating strong foundations in Computer Science fundamentals.
- Solved **500+ DSA problems** across LeetCode, Codeforces, and other competitive programming platforms.
- Secured **3rd Rank** in the Trading Algorithm Design Competition'26 at IIT BHU by developing a strategy for the NIFTY'50.
- Selected as a **Finalist** in the Bhartiya Antariksh Hackathon for an NDVI-based robust change detection project.
- Secured **2nd Place** in Electronica, TechFest SLIET 2024, for developing an IoT-based remote-controlled car.

Leadership

- **Co-coordinator, SSDC SLIET:** Organized technical workshops and coding competitions.
- **Website Head, Mavericks:** Managed the website and technical infrastructure.
- **Chief Designer, Novine SVIESA:** Led design and publication activities.
