Professional Summary

Computer Science undergraduate with experience in **Machine Learning**, **Deep Learning**, and **Full-Stack Development**. Skilled in building **AI-powered applications** using Python, TensorFlow, Scikit-learn, and Flask. Strong foundation in **ML fundamentals**, **software engineering**, and **problem solving**, with interests in **Computer Vision**, **Natural Language Processing (NLP)**, and **Intelligent Automation**.

Technical Projects

Sentiment Analysis Web Application | Live

Apr 2026

Real-time NLP-based sentiment classification system

Python, Hugging Face Transformers, PyTorch, Gradio

- Developed a web application for real-time sentiment analysis, classifying text as positive or negative with confidence scores.
- Leveraged a pre-trained DistilBERT model using Hugging Face Transformers for accurate NLP-based predictions.
- Built and deployed an interactive user interface using Gradio for seamless user interaction.

Object Detection using YOLO and OpenCV | Github

Mar - April 2025

Built a real-time object detection system using YOLOv8 and OpenCV

Python, OpenCV, YOLOv8

- Developed a real-time object detection system using YOLOv8 and OpenCV.
- Implemented image and video processing pipelines for multi-object detection.
- Applied computer vision techniques for surveillance, robotics, and automation use cases.

SMS Spam Classifier | Github

Apr-May 2025

Built a text classification model

Scikit-learn, TfidfVectorizer, MultinomialNB

- Achieved 97% accuracy and 96% F1-score on the SMS Spam Collection dataset using TF-IDF and Multinomial Naive Bayes.
- Applied TfidfVectorizer to convert text into feature vectors.
- Trained a Multinomial Naive Bayes classifier, achieving high accuracy and precision on test data.
- Evaluated performance using confusion matrix and classification report (precision, recall, F1-score).

Unmanned Aerial Vehicle - IoT | IIC SLIET

Nov 2024 - Ongoing

Autonomous UAV for agriculture

Linux (ROS), Python, LIDAR, Machine Learning

- Developed an autonomous UAV prototype designed for real-time agricultural monitoring and data collection.
- Applied machine learning techniques to identify plant health and detect objects in aerial imagery

Technical Skills

- **Programming Languages:** Python, C++, C
- **ML & AI:** PyTorch, TensorFlow/Keras, Scikit-learn, Hugging Face Transformers, OpenCV
- **Backend:** Flask, FastAPI, REST APIs
- **Databases:** PostgreSQL, MongoDB, SQLite
- **Tools:** Git, Linux, Google Cloud Platform (GCP), AWS
- **Coursework:** Machine Learning, Deep Learning, Probability & Statistics, Linear Algebra, Data Structures & Algorithms, Object-Oriented Programming, DBMS

Education

Sant Longowal Institute of Engineering and Technology

Aug 2023 - Present

Bachelor of Engineering in Computer Science and Engineering

CGPA: 9.12

Achievements

- Qualified **GATE CSE 2026**, demonstrating strong foundations in Computer Science fundamentals.
- Solved **500+ DSA problems** across LeetCode, Codeforces, and other competitive programming platforms.
- Secured **3rd Rank** in the Trading Algorithm Design Competition'26 at IIT BHU by developing a strategy for the NIFTY 500 index.
- Selected as a **Finalist** in the Bhartiya Antariksh Hackathon for an NDVI-based robust change detection project.
- Secured **2nd Place** in Electronica, TechFest SLIET 2024, for developing an IoT-based remote-controlled car.

Leadership

- **Co-coordinator, SSDC SLIET:** Organized technical workshops and coding competitions.
- **Website Head, Mavericks:** Managed the website and technical infrastructure.
- **Chief Designer, Novine SVIESA:** Led design and publication activities.
